Re: Consultant (m/f/d), Allianz Consulting

Dear Allianz Consulting team,

I am interested in joining **Allianz Consulting** as a **Consultant (m/f/d)**. I complete my **MSc in Finance at Nova SBE (ranked 6th worldwide)** by the Financial Times) in December 2026, where I have been consistently in the **top 10%** of my class. I am currently writing my thesis, selected for partnership with the **European Commission** through an application with a **2% acceptance rate**. I can start in **October 2026** and require no visa sponsorship.

My most recent experience was at a Munich-based AI startup this summer, where I was a **Founders Associate**. I led core functions like go-to-market and fundraising, and built automation tools for back-office work such as accounting and bookkeeping using **Claude Code** and open-source models. The role was entrepreneurial by nature. It taught me to take ownership, run several projects at once, and execute as I went. I am proficient with **GenAI and automation tooling** and build with it daily, shipping agents and workflows that run real processes rather than demos.

I have a background in consulting as well as in early-stage investments. Prior to joining the master's programme in Lisbon, I worked at **Alvarez & Marsal**, a top-tier restructuring firm headquartered in New York. I supported the project leaders in advising **Fortune 500** companies on Chapter 11 bankruptcy cases and worked closely with the legal team to restructure more than **\$100M** in debt and other balance-sheet liabilities. My work spanned scenario modelling for distressed M&A pathways and executive-level presentations for clients, in collaboration with the New York and Chicago offices. The models were built in **Excel** and the recommendations delivered in **PowerPoint**, to people who had to act on them that week. That experience deeply shaped my judgement and my communication, particularly in navigating critical negotiations between clients and creditors, where we stood as trusted partners and advisors. I also led the summer analyst cohort at the firm.

Earlier I worked as a **VC analyst** across a **\$70M** fund. My work ranged from drafting investment memos to supporting the General Partners on raising the next fund. The highlight was building an entire investment thesis around climate tech, which shaped the fund's investment philosophy and generated a strong pipeline of opportunities. That is also where I learned to question assumptions, stress-test them, and see how great enterprises are built from scratch.

I am currently also founding my own startup, **SQRlane**, an agentic system for freight forwarding. It is built to run the booking workflow end to end, with a prediction layer that surfaces disruption early enough to route around it and protect forwarders' margins. Every decision it takes is logged and nothing reaches a customer without a person approving it, and it runs on inference built in Europe for European operators, with **data sovereignty** as a first requirement rather than an afterthought.

I recently spoke with Arne Falkenreck and Johanna Achhammer, Executive Assistants to Dr. Axel Schell, CTO of Allianz Technology, about Allianz's vision and how it intends to navigate rapid technological change to stay a pioneer in insurance. Insurance is familiar ground for me: I co-founded **FitSure**, which priced health premiums from wearable data so that people were rewarded for staying well rather than for claiming. Those conversations are why I am applying to the consulting division. It is where a vision turns into something an operating entity can actually run, and that **change management** work is what I want to do.

Thank you for your time. I would be glad to talk.

Yours sincerely,

Abir Hilal Khan
