Re: Consultant (m/f/d), Allianz Consulting

Dear Allianz Consulting team,

I am interested in joining **Allianz Consulting** as a **Consultant (m/f/d)**. I complete my **MSc in Finance at Nova SBE (ranked 6th worldwide)** by the Financial Times) in December 2026, where I have been consistently in the **top 10%** of my class. I am currently writing my thesis, selected for partnership with the **European Commission** through an application with a **2% acceptance rate**. It asks whether the EU's **€662B climate budget** reaches the regions most exposed to climate risk. Cohesion money is allocated by income, exposure by physics, and the two maps do not overlap: the logic holds for mitigation, where emissions track the economy, and breaks for adaptation, where they do not. I can start in **October 2026** and need no visa sponsorship.

I am building **SQRIane**, an AI agent system for freight forwarding. It automates the workflow a forwarder runs on every booking and predicts disruption early enough to route around it rather than report it afterwards. Inference runs in Europe, built in Europe for European operators, so **data sovereignty** is a property of the system, not a promise. Every decision is recorded and nothing reaches a customer without a person approving it, because no regulated business will deploy an agent it cannot audit. That constraint, not the technology, is what stops GenAI adoption in practice.

I learned consulting at **Alvarez & Marsal**, on a **Fortune 500** turnaround covering more than **\$100M** of debt and leases under US Chapter 11. What I took from it was a way of working: breaking an ambiguous problem into parts that could actually be tested, building the analysis behind **board-level recommendations**, and supporting the project leads on the recommendations the client acted on. I also learned how those conversations are held, with creditors, shareholders and advisors each protecting their position, where one inconsistent figure costs you the room. That is where I developed an **eye for detail**: at that table, detail is credibility. All of it was built in Excel and delivered in PowerPoint. I now work daily in **GenAI and LLM tooling**, Claude Code and Codex among others, building and shipping skills, automations and workflows that move data between those same systems. The tooling has changed; the job of handing someone a decision they can act on has not.

At **SCAILE**, a Munich AI startup, I was a Founders Associate. I automated the weekly client KPI reporting with agent workflows and cut manual effort on it by **60%**. I ran the market sizing behind our positioning, we rebuilt the pitch and the roadmap around it, and MRR grew **80% month on month**. I pitched that positioning at **VivaTech** in Paris, Europe's largest technology event, to enterprises including **Siemens** and **Audi**, and I owned our North American clients end to end, signing and onboarding over **\$100k** of new ARR.

I want to do this inside Allianz Consulting, not at an external firm. An internal consultancy stays with the operating entity that has to live with the change, instead of handing over a recommendation and leaving. Adoption is the part I care about, and it is where AI projects actually fail.

Outside work I run, swim and hike. Being an athletic person made me an advocate for health, and that is where my interest in insurance began. During my bachelor's I co-founded **FitSure**, which priced dynamic health premiums from wearable data on a **risk prediction model**, designed so that people were rewarded for staying well and the claims ratio fell with them. Earlier I spent two years with the **United Nations Foundation**, running donation drives and health campaigns for over **1,200 women and children** in rural India. Insurance is one of the few industries where the commercial incentive and the social one point the same way, because prevention costs less than the claim.

Thank you for your time. I would be glad to talk.

Yours sincerely,

Abir Hilal Khan
