Re: Consultant (m/f/d), Allianz Consulting

Dear Allianz Consulting team,

I finish my **MSc in Finance at Nova SBE** (ranked **6th worldwide** in the Financial Times Masters in Finance ranking) in December 2026, where I have been consistently in the **top 10%** of my class. My thesis was selected for partnership with the **European Commission**, one of **400** chosen through a competitive application, and examines how the EU's **€662B climate budget** reaches renewable energy across member states and why the same instruments produce very different outcomes depending on where they land. I can start in **October 2026** and need no visa sponsorship.

I am building **SQRLane**, an AI agent system for freight forwarding. It automates the workflow a forwarder runs on every booking and predicts disruption early enough to route around it rather than report it afterwards. I built it so that every decision is recorded and nothing reaches a customer without a person approving it, because no regulated business will deploy an agent it cannot audit. That constraint, not the technology, is what stops GenAI adoption in practice.

My consulting work was at **Alvarez & Marsal**, on the North American commercial restructuring team. I ran a turnaround workstream for a **Fortune 500** client covering more than **\$100M** of debt and leases in a US Chapter 11, built the scenario models behind a **\$9.8M** cost and risk-mitigation plan that went to the board, and prepared the creditor negotiation materials, which preserved **\$2.5M** in enterprise value. All of it was built in Excel and delivered in PowerPoint, to people who had to act on it that week. I now work daily in **GenAI and LLM tooling**, Claude Code and Codex among others, where I have built and shipped skills, automations and workflows that move data between systems like PowerPoint and Excel. The tooling has changed; the job of handing someone a decision they can act on has not.

At **SCALE**, a Munich AI startup, I was a Founders Associate. I automated the weekly client KPI reporting with agent workflows and cut manual effort on it by **60%**. I ran the market sizing behind our positioning, we rebuilt the pitch and the roadmap around it, and MRR grew **80% month on month**. I pitched that positioning at **VivaTech** in Paris, Europe's largest technology event, to enterprises including **Siemens** and **Audi**, and I owned our North American clients end to end, signing and onboarding over **\$100k** of new ARR.

I want to do this inside Allianz Consulting rather than at an external firm. An internal consultancy stays with the operating entity that has to live with the change, instead of handing over a recommendation and leaving. Adoption is the part I care about, and it is where AI projects actually fail.

Outside work I run, swim and hike, and being an athlete is where my interest in health and insurance started: you learn quickly that health is something you build rather than something you claim for. I spent two years with the **United Nations Foundation** running donation drives and health campaigns for over **1,200 women and children** in rural India, and in 2023 I co-founded **FitSure**, which priced health premiums from wearable data so that people were rewarded for staying well rather than for claiming. Insurance is one of the few industries where the commercial incentive and the social one point the same way, because prevention costs less than the claim.

Thank you for your time. I would be glad to talk.

Yours sincerely,

Abir Hilal Khan
