Re: Consultant (m/f/d), Allianz Consulting

Dear Allianz Consulting team,

I am interested in joining **Allianz Consulting** as a **Consultant (m/f/d)**. I complete my **MSc in Finance at Nova SBE (ranked 6th worldwide)** by the Financial Times) in December 2026, where I have been consistently in the **top 10%** of my class. I am currently writing my thesis, selected for partnership with the **European Commission** through an application with a **2% acceptance rate**. I can start in **October 2026** and require no visa sponsorship.

My most recent experience was at a Munich-based AI startup this summer, where I was a **Founders Associate**. I led core functions like go-to-market and fundraising, and built automation tools for back-office work such as accounting and bookkeeping using **Claude Code** and open-source models. The role was entrepreneurial by nature. It taught me to take ownership, run several projects at once, and execute as I went. I am proficient with **GenAI** and ship agents that automate workflows to run real processes with credible use cases.

I come with a strong background in consulting and in early-stage investments. Prior to joining the master's programme in Lisbon, I worked at **Alvarez & Marsal**, a top-tier restructuring firm headquartered in New York. I supported the project leaders in advising **Fortune 500** companies on Chapter 11 bankruptcy cases and worked closely with the legal team to restructure more than **\$100M** in debt and other balance-sheet liabilities. I built the scenario models for distressed M&A pathways in **Excel**. I then turned them into the executive-level **PowerPoint** presentations that went to clients, working with the New York and Chicago offices. That experience deeply shaped my judgement and my communication, particularly in navigating critical negotiations between clients and creditors, where we stood as trusted partners and advisors. I also led the summer analyst cohort at the firm.

Earlier I worked as a **VC analyst** across a **\$70M** fund. My work ranged from drafting investment memos to supporting the General Partners on raising the next fund. The highlight was building an entire investment thesis around climate tech, which shaped the fund's investment philosophy and positioned it as a leading venture studio for startups solving climate-tech problems. That is also where I learned to question assumptions, stress-test them, and develop an **eye for detail**.

I am currently also founding my own startup, **SQRLane**, an agentic system for freight forwarding. It automates **60%** of a forwarder's daily jobs and runs the booking workflow end to end, with a prediction layer that surfaces disruption early enough to route around it and protect forwarders' margins. A **self-learning loop** feeds every outcome back in, so the system gets sharper the longer it runs. Every decision it takes is logged and nothing reaches a customer without a person approving it, and it runs on inference built in Europe for European operators, with **data sovereignty** as a first requirement rather than an afterthought.

I recently spoke with Arne Falkenreck and Johanna Achhammer, Executive Assistants to Dr. Axel Schell, CTO of Allianz Technology, about Allianz's vision and how it intends to navigate rapid technological shift to stay a pioneer in insurance. Insurance is familiar ground for me: I co-founded **FitSure** as an undergraduate project incubated at Shiv Nadar University, which priced health premiums from wearable data so that risk could be modelled far more deeply and the claim settlement ratio improved. Those conversations are why I am applying to the consulting division. It is where a vision turns into something an operating entity can actually run, and that **change management** work is what I want to do.

I would be glad to have the opportunity to contribute as a Consultant at Allianz. Thank you for your time.

Yours sincerely,

Abir Hilal Khan
